

4. E

ply covered with the usual Australian Melaleuca, Eucalyptus, scrub. The white or light-brown Eucalyptus, with broad foliage of the many species of Eucalyptus so peculiar to this country, and everywhere common, gives the landscape a most agreeable aspect. The first idea of a person coming from England is that all the persons are dying, or that each specimen has been struck with the lightning. The lightning, however, which produces deprives the country of its usual appearance this semblance of luxuriance. The Candell, a beautiful green grass, grows in the heavy floods which are experienced here, which in summer season are the most numerous, to rise fifty-six feet. It can be easily imagined that such a mass of water would cause immense damage. The heavy crops of New South Wales have lately year been almost entirely destroyed with rust. The greater part of last season's crop on the coast

[illegible]

pendens, the pendulous *Ulmus chinensis*,
the sweet bay, the oleander, the *Arbutus*,
and lilac, *Arundo donax* variegata, and

Several species of *Ficus*, are common in the shrubbery, and some of them are varieties of rhododendrons, and both Indian and Ghent *Azaleas*. These require special treatment, and are mostly grown in tubs. Roses are in great perfection. During the winter months the ground is literally covered with fallen flowers. Some of the most beautiful plants at present in abundance. The colours of verbenas, petunias, and geraniums are brighter, I think, than in England. The carnations, clematises, and calceolarias do not succeed so well. Phloxes, of various sorts, have produced the best from France, are particularly adapted to the climate. A few of the specimens of the variety of greenish shrubs here are the largest I ever saw; they grow very luxuriantly, and in flower; it measures seven feet each way. *Araucaria diwilla* is undoubtedly the finest specimen in cultivation. It forms a beautiful pyramid of the darkest green close foliage, and is high by thirty-five feet. *Cedrus Deodara*, *Davallia*, *Theophrasta*, *Ginkgo*, and *Magnolia grandiflora* are the trees. The lower garden is devoted chiefly to vegetables and fruit, but also contains a number of flowering shrubs, and a large collection of ferns. There is a considerable variety of obtainable fruit suitable to the cli-

[illegible]

workings" collected by myself at various amalgamation trials in Grass Valley, California, a place about thirty miles from the mouth of the Sacramento, and where, in the year 1864, I was attending an amalgamation of gold, proving on assay contained in the quartz waste over \$60 dollars to the ton, and in the sulphides over \$60 dollars to the ton, showing a saving of nearly one hundred per cent. over the value of that district. One of the most cautious and experienced metallurgists of California (Mr. Ashmun, we presume), at one time connected with the same works, and who has since used the same method by his own determinations the saving in a large number of cases was barely thirty per cent. of the gross contents of the ore, as shown by careful assays. The saving may be more or less, but it is large; losses are various, among which may be mentioned imperfect processes, insufficient comminution of the ore, and the difficulty of bringing the gold into solution by the use of mercury. The saving in the case of gold to the ton of quartz or waste, the ratio as one to thirty-two thousand, or less than one-tenth of one grain in the ton, is a saving, however, well known to all who are conversant with gold amalgamation, that the mercury often appears positively indifferent to the gold even when brought in contact with it. In California, however, this difference may be sometimes traced to a minute quantity of grease which effectually checks amalgamation, but it is quite as often due to some other and less obvious cause, such as the quality of the mercury, the amalgamators, and resulting often in a ruinous loss of a precious metal. Numerous inventions have been devised to save this loss, and avoid the causes which give rise to it, but the latest and most successful is the use of one of the most premium, viz., the use of mercurial vapour, has proved itself on the trial as the best way to a failure, and the problem has been solved. The great success was caused. Early in 1864 Professor Henry Wurtz communicated to me, in conversation, his conviction, as the result of preliminary experiments, that the best way to save the loss of the mercury would consist in mercury the water of amalgamating with gold readily under any of the adverse conditions which had thus far proved serious obstacles to the success of the process. In arriving soon afterwards for California, I have had no opportunity until within a few months past of acquainting myself with Mr. Wurtz's plans.

of date 27th December, 1861. To Professor urt we are indebted also for the discovery of a trace of manipulation by the use of which the combination of sodium and chlorine can be effected so easily.

Chemists are familiar with the violent explosion which follows the contact of sodium with mercury under ordinary conditions, an explosion as violent as to limit the mass of the elements to a very minute quantity. Professor urt has discovered, however, that mercury holds in minute trace of sodium in solution, will take up more than a hundred times its weight of it, and will be the subject of a future communication. I have been honoured to place before the academy two alloys thus formed. The one contains about two per cent. of sodium, the crystals being white, soft, malleable, and needing, as may be observed, and melts below 212 degrees Fahrenheit. The other contains about four per cent., commonly rather more, of sodium, and is a hard brittle solid, requiring to be fused in water, and consequently nearly as high as the fusing point of type metal to melt it, and which may, as you observe, be cast into ingots, and packed either under glass or in oil. It is not inflammable, may be fused in a crucible, and may be used in the same way as free mercury at a temperature below its point of evaporation. But for practical use it will doubtless be much more convenient to employ one of the most combustible forms of sodium, which may be conveniently transported by employing the common run quicksilver bottles, which, being filled with the alloy and tightly closed, will need no other protection from the air, and by cutting the neck off with water will give the desired liquid, and may then be used to charge the ordinary quicksilver for use.

OF THE USE OF SODIUM AMALGAM.

A preliminary experiment or two will serve to illus-

ON SODIUM AMALGAMATION.

By PROFESSOR E. SILLMAN.
From the Alta California, March 13th.

It is well known to metallurgists that the amalgamation of gold from quartz is attended with a considerable loss, and that in the best conducted operations on a large scale there is always a considerable, often a great loss, of the precious metal. Samples of waste "tailings" collected by myself at various amalgamation works in the Sierras of California, a place noted for the great success which has attended an amalgamation of gold, proved on assay to contain in the quartz waste over \$60 dollars to the ton, and in the sulphate waste \$60 to the ton, showing a loss nearly equal to the average amount in that district. One of the most cautious and experienced metallurgists of California (Mr. Ashurst, we presume), at one time connected with the consolidation of the quartz waste, has estimated the loss at by his own determinations the saving in a large number of cases was barely thirty per cent. of the gross contents of the ore, as shown by careful assays, both of the ore and the waste. The causes of the loss in the amalgamation of gold are, in the most imperfect processes, insufficient comminution of the ore, and the difficulty of bringing the gold into

in contact with the mercury. In an ore containing one ounce of gold to the ton of quartz or waste, the ratio is as one to thirty-two thousand, or less than one-

of one grain in one pound of stuff. It is, however, so well amalgamated, that the mercury often appears perfectly indifferent to the gold even when brought in contact with it, failing to amalgamate with it. This property may be sufficiently ascertained by the use of a small portion of the gold, which effectually checks amalgamation, but it is quite as often due to some other and less obvious cause, baffling often the skill of the best amalgamators, and resulting in a saving of gold.

Numerous inventions have been made in order to save this loss, and avoid the causes which involve it, but until lately with very inefficient success. One of the most recent and the most successful of these, mercury vapour, has proved itself on the trial in the hands of a few persons, but the problem has remained in a great measure unsolved. Early in 1864 I discovered that by the use of a small portion of the mercury, the loss of gold in the conversation, his conviction, as the result of previous experiments, that the use of a minute portion of the metal sodium would impart to mercury the power of amalgamating the gold, and that the use of any of the adverse conditions which had thus far proved serious a drawback to the practice of this art, saving some small alterations for Wurtz, I have had no opportunity until within a few days past, to put into operation the plan suggested by Mr. Wurtz's plans. Meanwhile he has secured his invention by letters patent, bearing date 27th December, 1864. To Professors Wurtz and I are indebted for the adoption of a part of the regulation by the use of which the act combination of sodium with mercury is entirely safe and easy. Chemists are familiar with the violent explosion which occurs under ordinary conditions, an explosion so violent as to limit the mass of sodium which may be used with safety to a very minute quantity. Professor Wurtz has discovered, however, that by the use of a small quantity of sodium in solution, will take up more than its weight of sodium with entire quietude. The method of manufacture, founded on this observation, will be made the subject of a paper, consisting of a number of experiments, to be read before the academy two of the alloys thus formed. The one contains about two per cent. of sodium, crystallised in beautiful prismatic crystals and needles, as may be known by the following description. The other contains about four per cent, commonly rather more, of sodium, and is a hard brittle solid, remarkably infusible, and requiring a temperature nearly as high as that of the sun to be melted. It is so hard that it is difficult to handle, being cast into ingots, and packed either under petroleum, as here, or in air-tight iron cans, filled with dry lime. This harder alloy may be used in the same manner as the other, but it is a point of evaporation. But for practical use it will doubtless be found more convenient to employ one of the more fusible alloys of sodium. This amalgam is made in the common run quicksilver bottles, which, being filled with the alloy and tightly closed, will need no other protection from the air, and by setting the flask in water, may be used to charge the ordinary quicksilver for use.

the verdict was against evidence; secondly, that the damage was trifling; thirdly, that there were no materials upon which such damage could be laid.

METROPOLITAN GENERAL SESSIONS.
TUESDAY.
DEPUTY MR. DISTRICT JUDGE DOWLING, MR. BUTLER
Mary Ann Smith, yesterday convicted of stealing, was sentenced to twelve months' hard labour by the Bench.

John Williams and David Ingram, who yesterday pleaded guilty to a charge of prize fighting, were sentenced to pay a fine of £100, with imprisonment until paid.

Elizabeth Gard, for the same offence, was sentenced to twelve months' labour in Sydney gaol.

William McDonough, acquitted on a charge of stealing, was yesterday sentenced to three months' imprisonment to add to another charge of stealing in a dwelling, was sentenced to five months' labour in Parramatta gaol.

John Grogan attacked the Bench, and was sentenced to hard labour, resented with intent, one Robert Davis, who said that on the day mentioned he was in a public-house drinking with a party of his friends, and a gentleman arose and asked some of them to step outside and he would show them a trick. He then placed, during which the prisoner snatched the prosecutor with a pocket knife. Verdict not guilty. Discharged.

John Grogan, found guilty of stealing a pair of boots from the property of Richard Hill, and against whom the value of forty-one former convictions, was sentenced to twelve months' labour Maitland gaol.

Caroline Hamilton was charged with stealing from the person of one Robert Banks, a gold watch and guard, the property. The defence was said to have been committed to the jury, and the Bench, after a short deliberation, returned a verdict of drink. Verdict not guilty. Discharged.

Edward Wells was indicted for that he being a seaman, had unlawfully and feloniously taken from the property of his employer Mr. T. L. Harpur, a gold pocket watch, the jury without leaving the box found the prisoner guilty, and he was sentenced to eighteen months' hard labour in Parramatta gaol.

Annie Edwards and Julia Piker, charged with stealing from the property of Joseph Farrell, the sum of £3 10s and a chain, his property, were acquitted.

The prisoners were defended by Mr. R. M. Foster. For the prosecution, Mr. J. H. G. was called.

Elizabeth was charged with having on the 3rd of March last, at Banksville, stolen from the property of one John Smith, the sum of £8. It appeared that the parties were seated with wine at a certain game called "two up," when the prisoner, who was a stranger to the party, took a glass of wine used by the player and found one of them to have be-

consisting of 12 cases kerosene oil, total 12000 gallons, at the
Bank Auction Rooms, this day, Wednesday, 6th June, 1866 at 12
o'clock. Samples at the Rooms. Detailed particulars are
published in this day's **Star**.—Adv.

COZZENS'S KEROSENE OIL CHANDLERS, &—John G.
Colan has desired us to call the attention of oilmen, lamp salesmen,
ironmongers, and others interested, to his sale of the Kerosene
of Messrs. S. Hoffman and Co's Store, Wynyard-street, on account
of which it may be uncertain, 17 cases Cozzens's kerosene oil, more or
less damaged, at the Bank Auction Rooms, at 11 o'clock; 15
packages of Cozzens's kerosene chandeliers, lamps, &c. For further
particulars see advertisement.

Messrs. Richardson and Wreghitt, sold to-day, at auction, a lease for four years of the property adjoining to the late Mr. Donald McIntyre, called Kojuga and Caen, in the Hunter River

kingdom, and I have taken only a turkey from this fellow." The King gave the peasant ten ducats, and pardoned the soldier for the boldness of his witty retort, saying to him, "Remember, if I have disposed of Augustus of a kingdom, I have kept nothing for myself."

Fourth.

M. R. WILLIAM TINDALL has been instructed to sell, at the Victoria, Fourth **TRIP DAY**, 6th June, at 2 o'clock.

Several cars, broken and unbroken. Also, a new **Spanish** cart, mare, and harness, in one or more lots to suit purchasers.

Terms, cash.

Fat Cattle. Fat Cattle.

Alteration of Time.

At the Victoria Yard, Petersburg, on **WEDNESDAY**

HARRISON and JONES are instructed by **Edward Flock, Esq.**, to sell by auction **THIS DAY**, 6th June, at 2 o'clock sharp, 160 head really prime cattle.

N.B.—The above are reported to us as a very superior lot of cattle, to which we would direct the attention of the trade, and Melbourne.

This sale has been postponed for the convenience of buyers, to sell with the undermentioned sheep.

To Parties Furnishing, Dealers, and others.

M. R. H. VAUGHAN has received instructions

IVATIONS from Mr. Dunn to sell by auction, on
THIS DAY, 6th instant, at 11 o'clock, on that premises,
No. 100, Castlereagh-road, opposite the Queen's school,
Superior and useful household furniture, including
chiffoniers, chairs, couches, chaise drivers, iron
kitchen utensils, pipes, iron bedsteads, bedding,
glass, carpets, and effects.

Under District for Rent.

MR. H. VAUGHAN has received instruc-
tions to sell by auction, THIS DAY, 6th
instant, at 2 o'clock, on the Premises, Finsbury College,
Botany Road.

Household furniture and effects.

Preliminary Notice.

Household Furniture, &c.

FRIDAY, 8th June, at 10 o'clock.

MR. H. D. COCKBURN has been in-

IV. A. instructed to sell by auction, on FRIDAY, 21st June, at 1 o'clock, the following:-
A quantity of household furniture, &c.
Terms, cash.
No reserve.

THURSDAY, June 7th.

To Photographic Artists and others.

The Goodwill, Plant, Cansons, Materials, Stock, Furniture, &c., of that old-established and flourishing photographic Gallery (late J. Walker's), No. 233, Pitt-street, near King-street.

(The best position in Sydney.

MESSEURS. CHANDLER and CO. have received instructions to sell by auction, on the premises, 233, Pitt-street, near King-street, on THURSDAY, 7th June (unless previously disposed of by private contract),

The goodwill, cameras, plant, materials, chemicals, stock, furniture, &c., of the above well-known photographic gallery, together with about 4000 negatives.

The auctioneers beg to call attention to the above

Variable business, which is decidedly in the best situation in Sydney. The connection attached to it, is the most extensive and the most profitable. The business is carried on by a few negatives alone producing a good income, and any person who undertakes the art could speedily make a fortune. The late proprietor has been independent in a few years.

The camera lenses are the best in the colony.

Any person wishing to trade privately for the above can do so previous to the 1st of April, 1841, as the auctioneers otherwise it will be sold in one lot or separately.

Without reserve.

Office—146, Pitt-street, near the Metropolitan.

**OVERTIME GUNPOWDER
FINE GRAIN BLASTING C**

OVERTIME GUNPOWDER
PINE GRAIN BLASTING GUNPOWDER
TREBLE F GUNPOWDER
CANNON POWDER, more or less damaged.

T. W. BOWDEN will sell by auction, at the magazines on Goat Island, on FRIDAY next, the 8th June, at 11 o'clock prompt, 29 packages of overtime merchant's gunpowder, or ship's stores.

Also,
About 100 barrels of cannon powder, more or less
damaged. And a lot of sound fine grain blasting
and PFF gunpowder, in lots to suit the purchasers.

Four Half-Acre Allotments
In the Town of Kiama.

T. W. BOWDEN is instructed by the
executors of the late Mr. Marsh to sell by
auction, at the Land Sale Rooms, 154, Pitt-street, at
KILGERRA, N.S.W.

Four half-acre allotments in the rapid, improving and beautiful airport town of Klam, being selections made as far back as 1840 and 1843.

Lot 1.—Contains 2 roods, number 5 of section 8, bounded on the north by lots 3 and 4, being a line 5 chains long; on the west by Shoalhaven-street, being a line bearing south 77 degrees east 66 feet; on the east by lot 2, being a line bearing south 77 degrees east 66 feet; on the south by lot 6, being a line bearing south 66 degrees east 6 chains; and on the east by lot 30 on chain.

Lot 2.—Contains 2 roods, number 6 of section 8, and adjoins the previous lot, having 66 feet to Shoalhaven-street by a depth of five chains.

Lot 3.—Contains 2 roods, being number 20 of section 13 bounded on the east by Shoalhaven-street, being a line bearing north 27 degrees east 66 feet; on the

Lot 4.—Containing 2 rods, number 19 of section 16 bounded on the east by Shoelhaven-street, being a line bearing northerly 27 degrees east 66 feet; on the north by lot No. 20 four chains; on the west by allotment No. 6 one chain.

After the above will be sold,
An allotment in the town of Appin, containing 2 rods being lot 7 of section No. 1, bounded on the west by the Appin Road, bearing north 19 degrees east 66 feet, originally granted to one William Dwyer.

These lots must be disposed of to close up the

estate.

THE LABA STATION.

District of Bourke.
Gulf of Carpentaria.

For Positive and Unreserved sale.
To close a Partnership.

MR. TREBECK has received instructions to sell by auction, on WEDNESDAY, 4th July, The above very fine station, consisting of 700 acres

Grazing capabilities estimated at 140,000 sheep, in a season.

For further particulars see each Saturday's MORNING HERALD; or apply to P. N. TREEBECK, Stock and Station Broker, 60, Margaret-st.

ALPACAS.

FOR POSITIVE SALE.

(WITHOUT RESERVE.)

By order of the GOVERNMENT of
NEW SOUTH WALES.

The whole of the flock of
